

Personal Assessment

A--How this design fulfills the requirements of the job?

This database is used to search the books in the library. Also used to update new books added in the library. And maintain issue details.

B – What issues you faced in creating your design?

To convert in third normal form I faced difficulty. Many to many and one to one relationship became a little bit problem to understand.

C – What areas would you improve if you had more time?

I have improved issue detail facilities if I have more time.

D – Is your ER diagram in 3rd Normal Form? If so, why? If not, why not?

My ER diagram is in 3rd normal form because it doesn't have many to many relationships and has primary key to all tables. And every non primary attributes is related to primary key attribute.

E – What grade do you think you deserve for this project?

A+
