Business Overview:

The purpose to having a computer based system is, it helps to increase the market share and it's very easy for customers to use. It is increasing the demand among the customer. This project is concerned with developing a **Library Inventory Management System** using Object Oriented Programming. In this system the library management becomes more efficient & easier to handle with its reliable system components and to develop a software application which provides the functionality of issuing books, return books, cataloging and managing the journals.

This system enables the members to check for the available books, their issue records and for the librarian helps in maintaining records of books issued, fines to be collected, list of books etc...

Business Specifications:

- General transactions as Issue, return and status of books.
- To add, remove or modify the available lists of books.
- Improved and optimized service
